ROCKNOLL'S BEST

BUTTERFLY BUSHES

BUDDLEIA—SUMMER LILACS

Perhaps the most prolific flowering of all shrubs blooming continually from July till frost if kept picked. Large attractive spikes of flowers 8 to 10 in. long. Tips freeze back in winter, but renew rapidly in spring. Plants 6 to 8" high with ball of sphagnum and perlite intact on root to assure successful transplanting.

ROCKNOLL NURSERY

MORROW, OHIO

HARDY PERENNIAL FLOWERS

Rocknoll is located 22 miles north of the Ohio River in Southwestern Ohio. We have severe cold winters, often without a protecting snow blanket, and hot dry summers. Temperatures range from 20 degrees below zero F. in winter to 100 degrees in the shade in summer. We have periods of heavy rainfall and periods of drought just the same as you do. Our soil, while very fertile and productive, is only good farm land used for growing corn before we took it over.

ROCKNOLL'S PLANTS WILL GROW FOR YOU AS THEY ARE ALL 2 YEARS OLD.

MOSTLY FIELD GROWN, SOME POTTED FOR BETTER TRANSPLANTING.

NEW ROCKNOLL CHRYSANTHEMUMS FOR 1960

TUPELO

M6-11 TUPELO—A showy, upright outdoor Mum, so named for the resemblance of its brilliant coloring to the *Nyssa Sylvatica* or Tupelo tree leaves in the Fall. Best described as a brilliant scarlet with darker lights. The flowers are fully double, 3 to 5 in. across, starting to open about Sept. 25th. The plant itself is very vigorous, producing lots of ground shoots. Its upright habit, completely smothered with bright scarlet flowers, makes Tupelo a must for every Mum garden.

M6-9 NEW CINDY—New Cindy, like Old Cindy, is a bright dark blood red semi-double Daisy Mum of medium height, starting its bloom in late September. The plant presents a flat head of extremely bright flowers emphasized by the golden stamen in the center. If you need a bright flash in your fall garden, try New Cindy.

M6-10 SUGAR VALLEY—Sugar Valley is the very essence of fall. An alive copper bronze self-colored pompon Chrysanthemum, 2 to 3 inches across. The fully double flowers open the early October Mum season. Excellent for cutting or general garden show.

7 NEW ROCKNOLL MUMS \$3.49
One each of the above, carefully labeled.

Selected from our test field of Mums. These are the cream of Rocknoll's own seedlings for 1957-58. All have been tested for 2 or 3 years and have proven their desirability as healthy, outstanding, early flowering varieties.

60c Each **3 for \$1.75**

M6-5 AMBER RAYONETTE—Light amber flowers blooming in great profusion on 30-inch plants. The individual flower is composed of numerous tubular or ray-shaped petals which reflect in the bright fall sun. As most of the Rayonettes are late flowering, this one is a very advantageous break for the gardener who is seeking the early exotic effect of the Rayonettes and Spiders. Flowers 3 to 4 in. across. Starts late Sept.

M6-6 BRISTLE CONE—Very early (late August) flowering bright bronze cushion that will continue blooming till frozen hard. Flowers 2 in. across. Petals short and incurved. Reminiscent of a short pine cone. The whole plant is completely covered with flowers giving it a very spectacular appearance.

M6-7 DRAGON FLAG—An exceptional Cushion Chrysanthemum. The entire plant is smothered with double soft Mandarin yellow-shaded apricot flowers from September 1st on. The plant is very vigorous in growth. Does not exceed a height of 15 inches. While opening early, the flower does not fade or discolor with age. The name Dragon Flag comes from the yellow that was the background of the old Chinese Imperial Dragon flag.

M6-8 GRACE LYNN—Double showy old rose flowers shading to silvery rose with age. Flowers are 3 to 4 inches across on sturdy upright plants about 30 inches high. Flowering starts in mid-September with buds continuing to open in November. The foliage is a heavy dark green, plants vigorous in growth.

DRAGON

NEW MUMS FOR 1960

Selected from our own test gardens. Plants are our own seedlings and those of other prominent growers throughout the world. All from peat pots with soil intact. The varieties listed here have been selected in the ways, the ones ordered by the public when they see them in bloom, the ones that are the healthiest and best propagators, and the ones we feel are the best for general Chrysanthemum gardens.

SPRAYING FRUIT

To be successful all fruit trees must be sprayed. Your State Department of Agriculture will be glad to furnish you with the proper spraying program for your particular locality. Please write to them and request such information.

PLANTING AND FERTILIZING FRUIT TREES

Most any good soil is suitable for fruit trees. For success, select a well-drained location where water will not stand summer or winter. Dressing of well-rotted manure and regular feedings with a complete plant fertilizer after the first year are greatly beneficial.

2 Apples, 1 Peach, 1 Cherry, 1 Pear

A \$14.23 Value **ONLY \$12.00**

NOTE

Fruit trees are dwarfed by grafting and budding on slow maturing root stocks. Be sure the top graft or bud—identified by a slight bulge or crook—is planted at least 1 to 2 inches above ground level. If this is not done, the desired variety will produce its own roots and will no longer be dwarfed.

HUMIDIFIED PACKED ROSES

To assure a minimum of water loss, the roots of Rocknoll's roses are covered with a damp packing material and tightly rolled in moisture-proof paper. The tops and the neck of the root-covering packages are then sealed by dipping in a special non-burning wax. This process assures the plants being viable and sure to grow.
